

Women V Cancer Ride the Night 2020 Bike Lights

With Women V Cancer Ride the Night 2020 just around the corner, it's time to start thinking about which bike lights you're going to use for the challenge. Both front and rear bike lights are a must and we also recommend keeping spare batteries and back-up lights throughout the cycle. This is especially if you use small lights, as they are likely to run out faster.

Many of our Ride the Nighters also use helmet lights so they're extra bright and can get an even better view of all the awesome landmarks we pass – and we'll pass even more than ever this year!

Top tips for your Ride the Night Bike Lights

- FRONT Minimum 100 – 200 + lumen brightness
- REAR Minimum 20-30 + lumen
- Minimum 10 hour run time
- Rechargeable and Waterproof
- Easy and secure tool-free fitting
- Simple control (with a gloved hand)
- Flash and constant modes
- Mount your lights as high up on your bike as possible to ensure you are visible
- Check where your lights are pointing, especially the front lights, so you don't blind your fellow riders or motorists
- Make sure your lights aren't obstructed by bags or other equipment.
